“Denmark–Vietnam Alumni Environment Day – Cycling to beat air pollution”

If you have ever been to beautiful Europe, especially Denmark, you will love the beautiful scenery, unique architecture, developed economy, stable social security and clean air, not many private vehicles that most people use public transport, and especially use bicycles. Denmark is known as the nation of BICYCLE riders.

Those who have loved Denmark, have lived, studied, worked or visited this country love the image of people cycling on the street. To evoke that friendly and beautiful image, inspire a less polluted, healthier life, encourage the movement to limit the use of personal vehicles, increase the use of public transport and environmentally friendly vehicles, with sponsored by Danida Alumni Activities Grant, on the morning of December 1, 2019, Denmark Vietnam Alumni organized: "Environment Day - cycling to beat air pollution". Responding to the program, more than 100 athletes and volunteers participated in the program, of which about 20 were Denmark Alumni.

At the event's opening ceremony, Mr. Carl Redmond, Associate Professor of International Cooperation at the University of Northern Denmark (UCN) shared about cycling culture of the Danish.

Accompanying to support the program are 02 sponsors from Viet An Group - The company specializes in automatic monitoring of air and water and Van Lang Industrial Waste and Environmental Consultancy

Company..

The cycling route goes through 02 routes of Truong Sa and Hoang Sa with a total length of 32 km.

In the cool, fresh air of Sunday morning, blending into the beautiful streets of Ho Chi Minh City, the cyclists from Denmark VietNam Alumni conveyed the message: Cycling to beat air pollution - please use bicycle vehicles instead of motorcycles and cars to beat air pollution.

After the athletes completed the 32km cycling route, the organizers conducted the award for the winning athletes.

Denmark VietNam Alumni Network members had a fun time together to share about networking activities and development in the coming time.
